FastQC *Version:* `0.12.1`

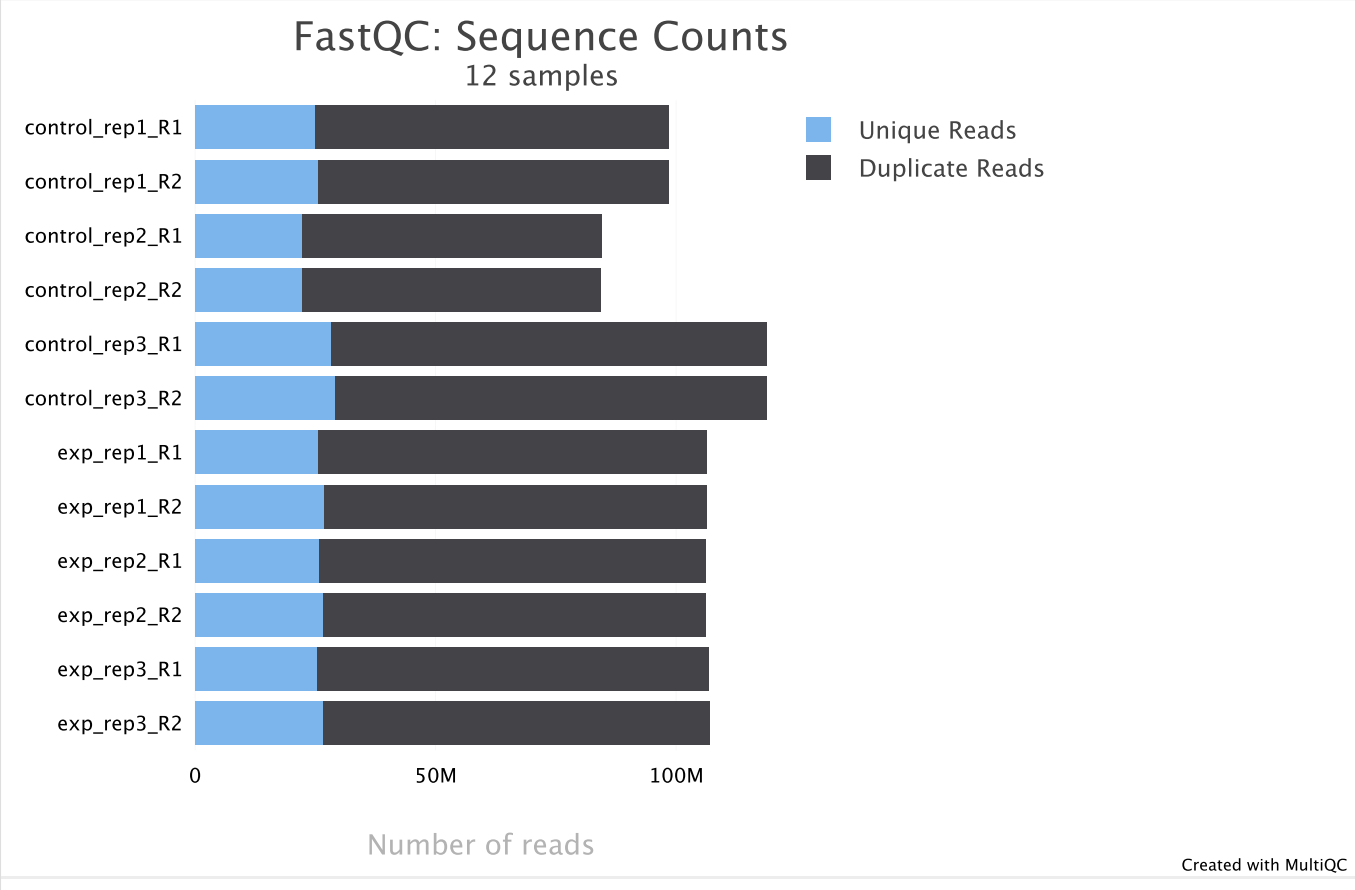
Quality control tool for high throughput sequencing data. *URL:* *http://www.bioinformatics.babraham.ac.uk/projects/fastqc*

Sequence Counts

Sequence counts for each sample. Duplicate read counts are an estimate only.

Percentages

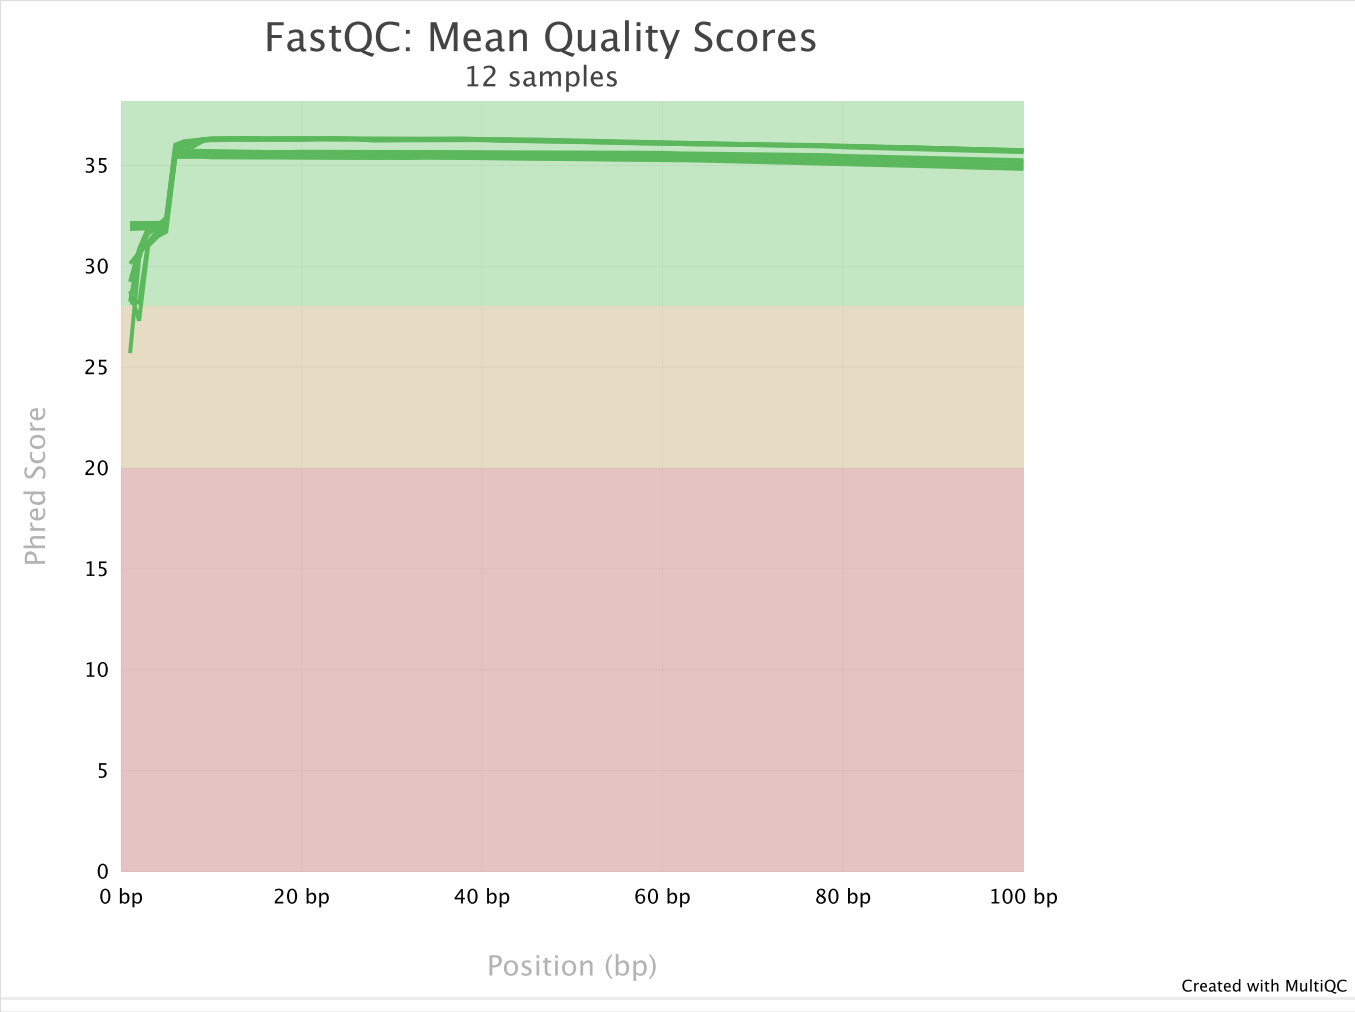
Export Plot



Sequence Quality Histograms 12

The mean quality value across each base position in the read.

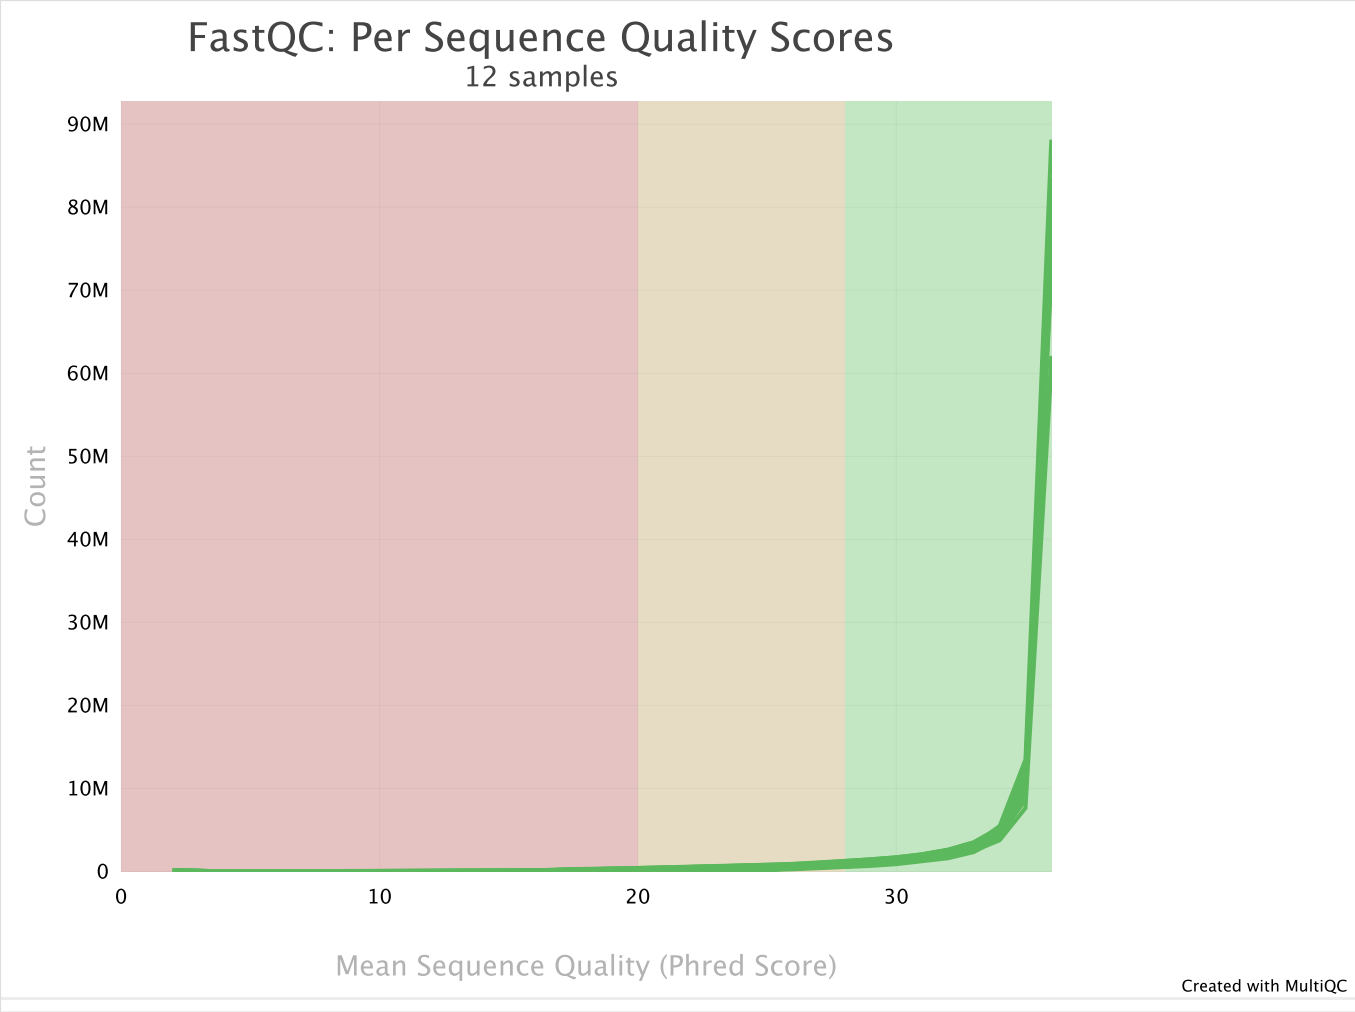
Export Plot



Per Sequence Quality Scores 12

The number of reads with average quality scores. Shows if a subset of reads has poor quality.

Export Plot



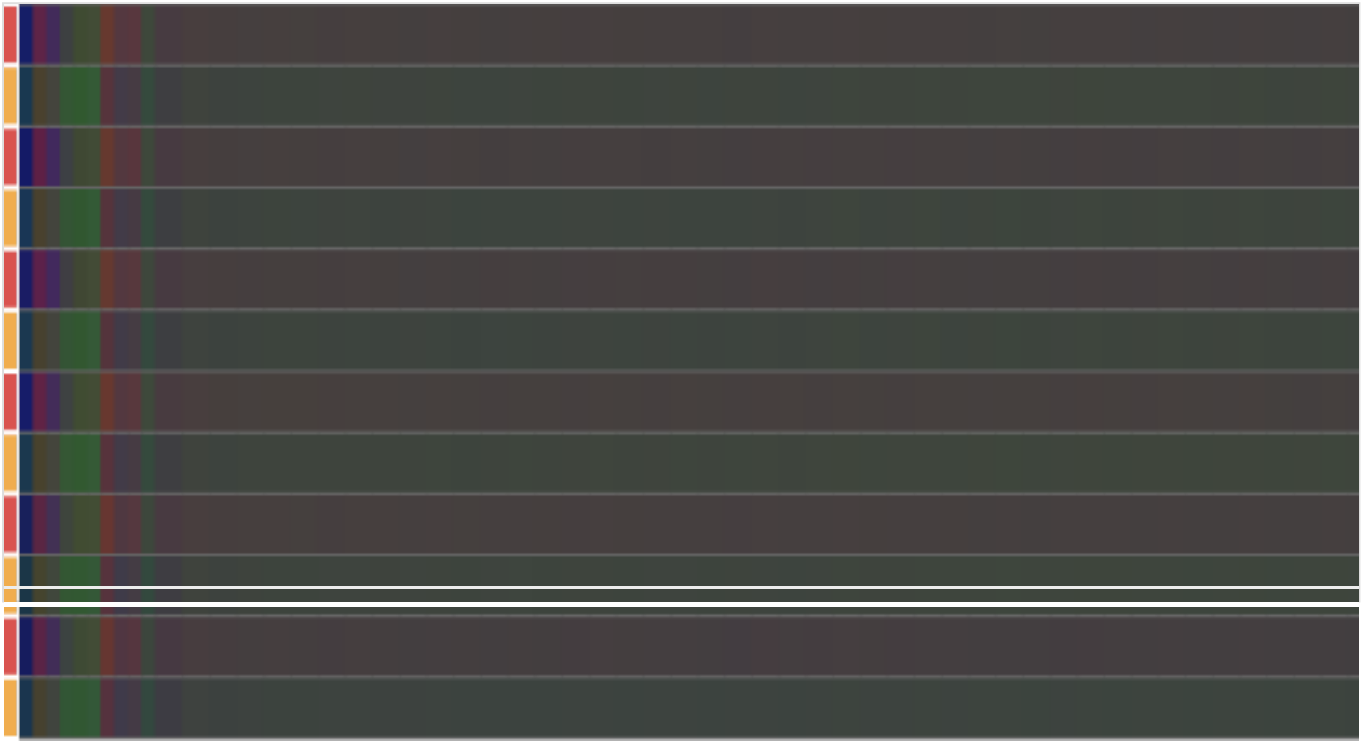
Per Base Sequence Content 6

The proportion of each base position for which each of the four normal DNA bases has been called.

Click a sample row to see a line plot for that dataset.

Rollover for sample name

Position: - %T: - %C: - %A: - %G: -

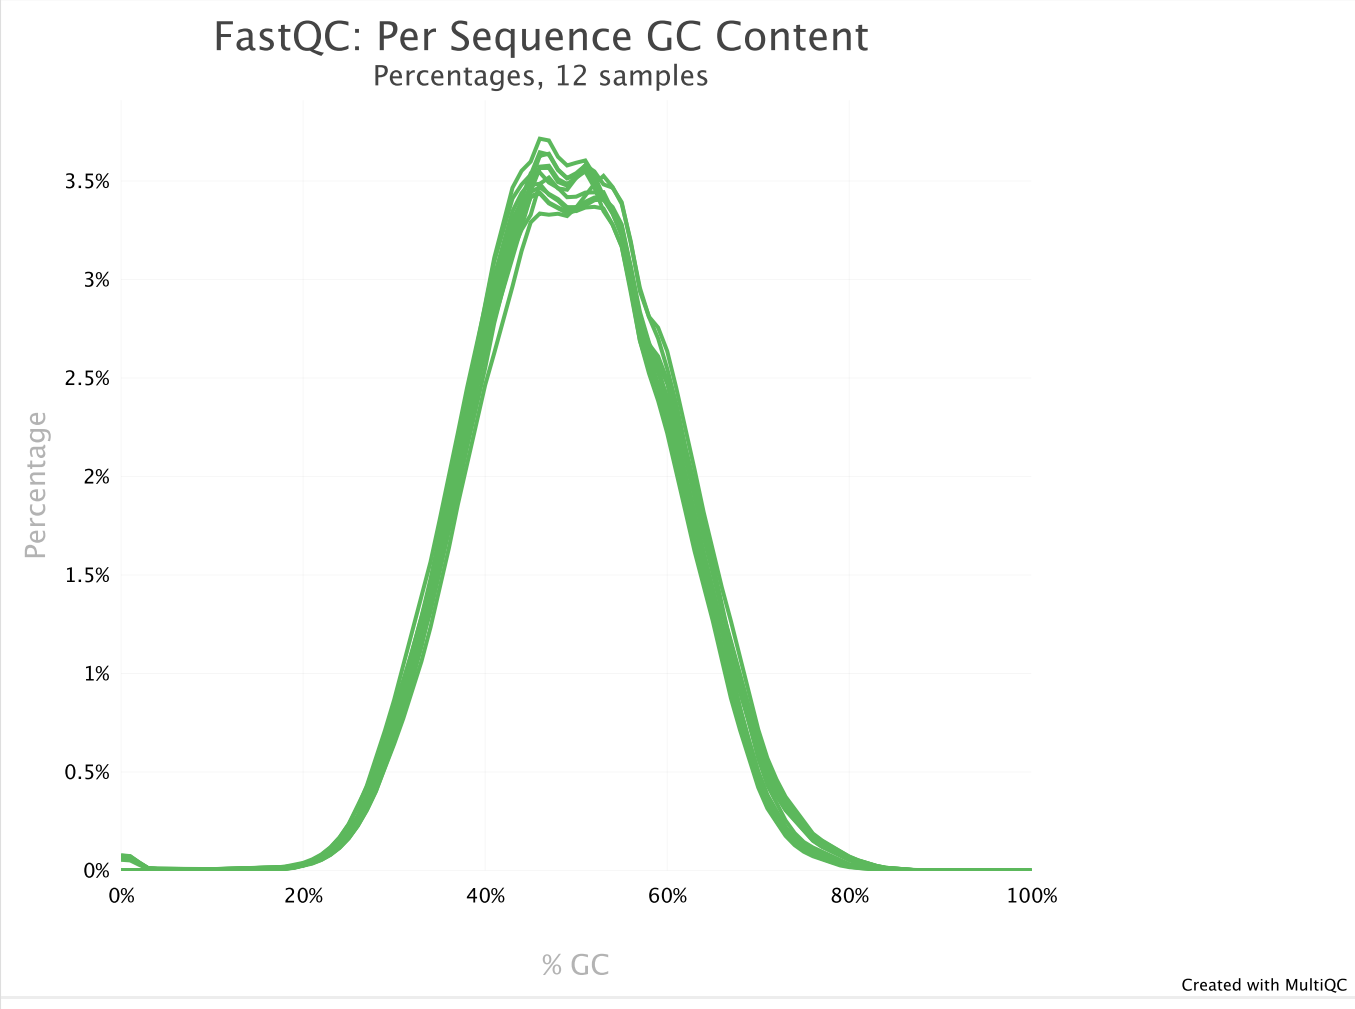


Per Sequence GC Content 12

The average GC content of reads. Normal random library typically have a roughly normal distribution of GC content.

Percentages | Counts

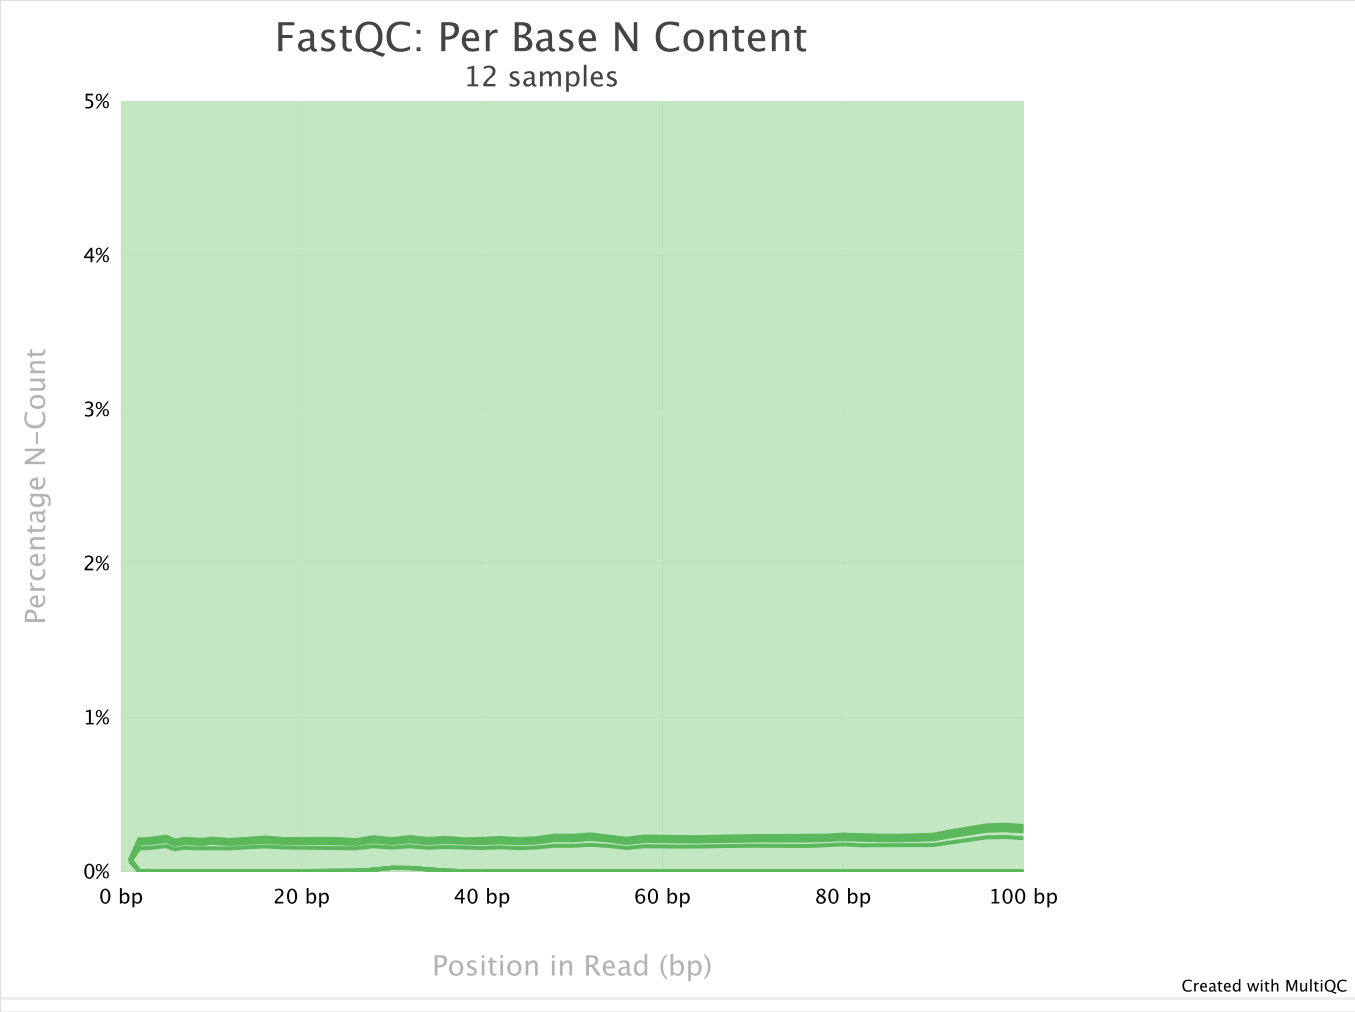
Export Plot



Per Base N Content 12

The percentage of base calls at each position for which an `N` was called.

Export Plot



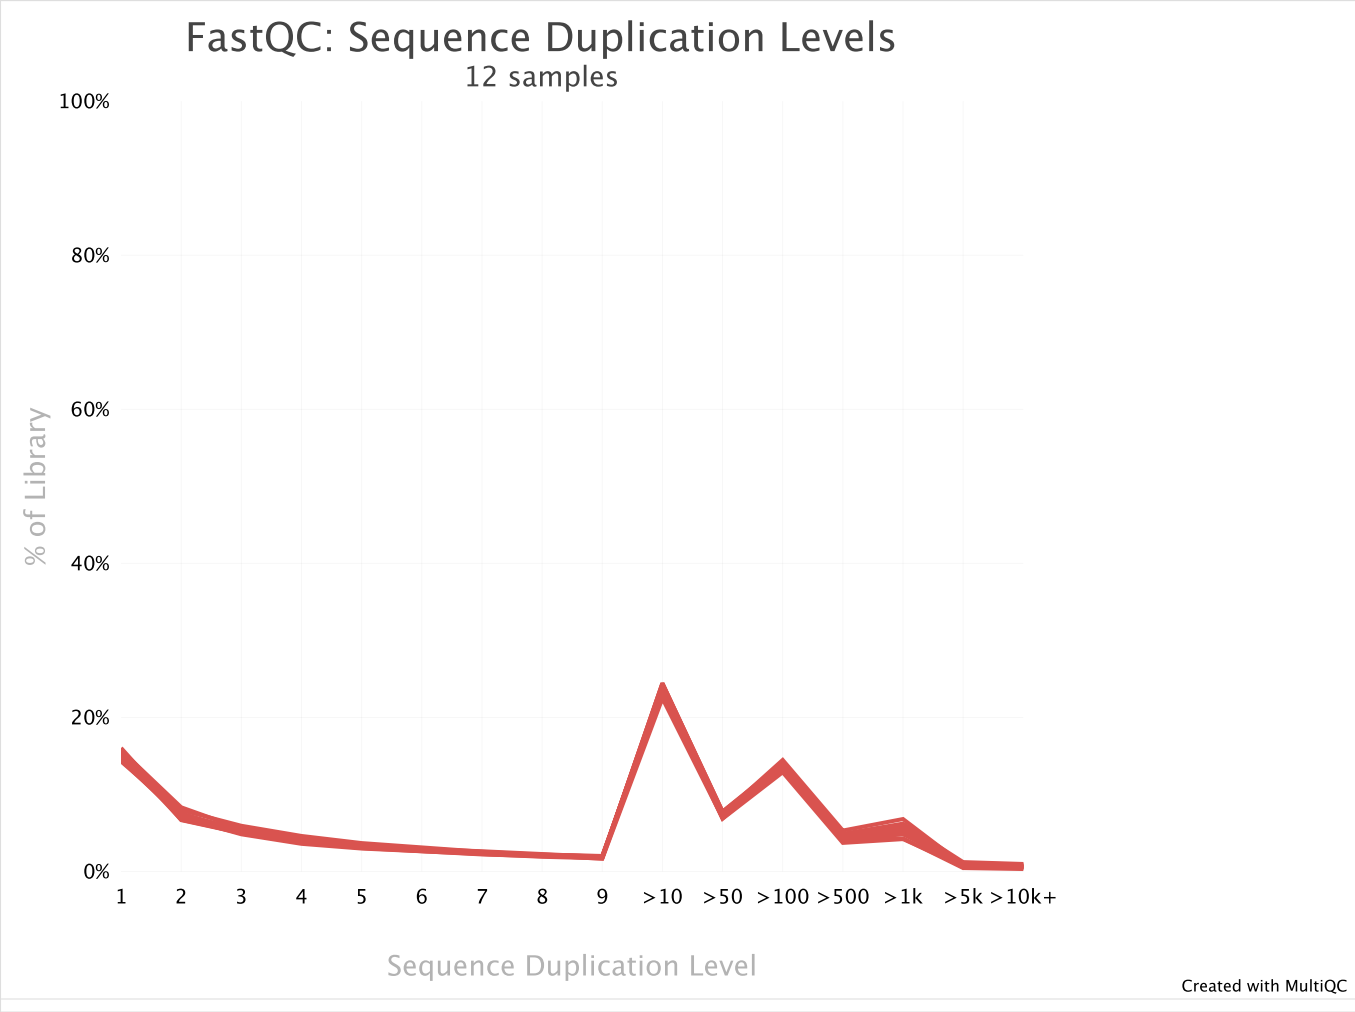
Sequence Length Distribution 12

All samples have sequences of a single length (100bp)

Sequence Duplication Levels

The relative level of duplication found for every sequence.

Export Plot



Overrepresented sequences by sample

6 6

The total amount of overrepresented sequences found in each library.

12 samples had less than 1% of reads made up of overrepresented sequences

Top overrepresented sequences

Top overrepresented sequences across all samples. The table shows 20 most overrepresented sequences across all samples, ranked by the number of samples they occur in.

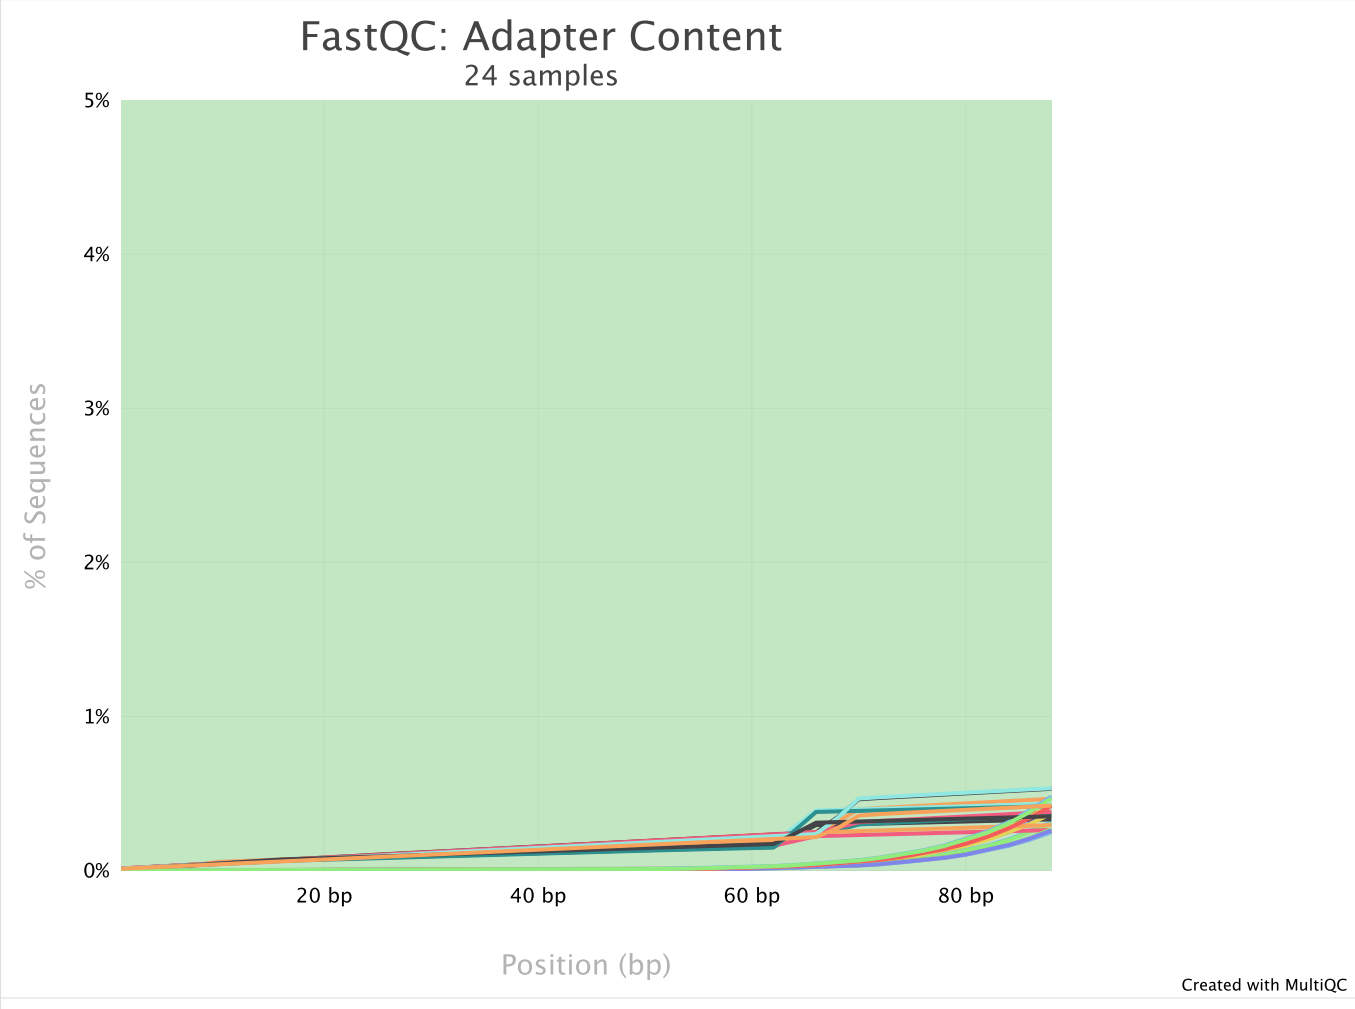
Adapter Content 12

The cumulative percentage count of the proportion of your library which has seen each of the adapter sequences at each position.

Export Plot



Status Checks

Status for each FastQC section showing whether results seem entirely normal (green), slightly abnormal (orange) or very unusual (red).
